
Context construction
what enters the context, and when
C1 System prompt
systemprompt.md
every call
C2 Guardrails
guardrails.md
every call
C3 Memory
LongTermMEMORY.md
every call
C6 Skills
skills/<n>/SKILL.md
on invoke
Agent = model + harness
8 editable files around a model
whose weights never change
context
Frozen model
$\mathcal{M}$
tool call
result
delegate
trajectory τ
+ deliverable y
output of $\mathcal{A}(q; \mathcal{M}, \mathcal{H})$
Middleware
hooks every tool call, outside the model's discretion
C8 Plugin
inside the tool loop
tool calls + turn boundaries
plugin/<name>.ts
Tool interface
what the model can call, and how
C4 Tool guidance
tool_guidance.md
every call
C7 Scripts
scripts/<name>.py
via bash
Orchestration
when work is delegated to a new agent, and how
C5 Subagents
sub_agents/<n>/AGENT.md
task tool
new agent
